physical environment. To follow the story of village life in Greece as portrayed in this book, one must be able to go imaginatively from one part of Greece to another, since every experience described will be related to the place where it occurred.

Macedonia, linked historically with Alexander the Great and the missionary activities of St. Paul, is a part of the administrative division of Northern Greece. Its northern mountain barrier separates it from Yugoslavia and Bulgaria, each of which has adjoining territory which it too calls Macedonia. The Greeks believe that no area has been more bled over than Macedonia, where Greek and Slav meet.

Thrace, to the east, is also in Northern Greece and is the one area where the Turkish minority still live. Like Macedonia, it is famous for the Oriental kind of tobacco grown there.

Epirus, the northwestern province, is a mountainous land of great beauty and stormy traditions. It borders Albania.

Thessaly, south of Macedonia, boasts Mount Olympus and fertile plains which produce a fifth of the country's wheat.

Central Greece, stretching from the Ionian to the Aegean Seas, holds many tourist attractions such as Thebes, Delphi, and Athens. It also includes the slender island of Euboea along its eastern flank.

The Peloponnesos, separated from the rest of mainland Greece by the Corinth Canal, is an archaeologist's paradise. It is important agriculturally as well as being intimately connected with Greece's liberation from Turkey in 1829.

In addition to these regions on the mainland there are five island groupings in the Greek kingdom:

The Aegean Islands hug the coast of Turkey. Lesbos is the largest, Chios perhaps the best known.

The Dodecanese Islands, to the southeast of the mainland, came under Greek control after World War II with the defeat of the Italians. Rhodes, the chief island, is one of the major tourist attractions of the Eastern Mediterranean.

The Cyclades Islands are also to the southeast of, but nearer to, mainland Greece. Tinos, one of these islands, is the site of a miracle-working shrine visited by thousands of visitors every year on the Day of the Assumption.

Crete stands alone. Its civilization predates that of the mainland. Because of its better soil, more of its people are interested in farming than in fishing or shipping.

The Ionian Islands, on the west coast of Greece, were the hardest hit in the devastating earthquakes of August 1953. They include the beautiful island of Corfu, which was not damaged, as well as Ithaca, home of Odysseus.

These regions, particularly those of the mainland, will be more than names on the map as one becomes familiar with the peasants who dwell in them and with many of the natural features associated with the mountains, the plains, and the sea.

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

take anything else with him, he took off his cloak and filled it with straw. As he hurried away in his rush and fright the straw bit by bit fell on the road and became stars. When he got to his house his robe was empty and behind him followed the monks. Since then we call these stars the priest's straw.

Rain. When summer has come to an end and fall is there we pick our grapes and harvest our maize and are waiting for God to send rain so that we can sow our wheat. The first rains start in mid-October. . . . They start either with a slow modest rain or sometimes with a strong one. The strong rain starts abruptly and all hell lets loose. The sky meets with the earth. Lightning, thunder, wind, hell. We all run with our hoes to hold the water back from entering our homes; others run to pull their animals out of ravines so that the water does not carry them away. Others gather the things that have remained outside, and others shelter themselves in their homes and gaze at the storm from their windows. When the weather turns good again it is the joy of God. Then we get ready our agricultural equipment for the field; it is time to sow. Rain is our life. Without it nothing grows; we are lost. But the rain can also do harm. When it rains suddenly the rivers come down with a rush carrying things and destroying our fields. It carries many rocks and stones onto the plain; when it rains and blows, it's hell. It throws down the wheat and it does a lot of damage. A good rain is a slow one. . . .

But nature is more than a collection of stars or plants or animals. It represents the forces against which man must contend as he seeks to wrest his living from the soil; nature brings disasters to which man must adjust even though he does not completely reconcile himself to his misfortune.

One type of catastrophe that visits Greece at frequent intervals is the earthquake, which comes usually in the late spring and summer. Wherever a person travels in Central Greece, Thessaly, or the Peloponnesos, he hears of the damage done by tremors. There is today an Old Corinth and a New Corinth, the latter being built after the old city was destroyed in 1858. New Corinth was once more destroyed in 1928 and rebuilt. In one village people still talk with sadness of a quake which occurred in 1875, killing forty-seven women and children inside the church. One of the most damaging earthquakes of recent memory was the August 1953 series of tremors in the Ionian Islands which destroyed so much of Cephalonia, Zante, and Ithaca. In April and May of 1954, more than thirty persons were killed in the quakes of Thessaly, three hundred injured, and thirty-two thousand made homeless.

Nature shows its unkindness in other ways. Sudden hailstorms, drought, and insect pests take their annual toll in many parts of Greece. While on a trip with the inspector of agriculture from Larissa, Thessaly, through some fields recently damaged by a storm, I asked him what the peasants thought of such a devastating rain. He said that they did not feel any enmity against the elements but do say in all seriousness to them "na se pare ho diavolos!" (may the devil take you!)

123 Kokinya is a village of about one hundred houses not far from Kozane
●731 in Western Macedonia. The prefect of Kozane heard that a serious storm
777 had hit the village and went out with his agriculturist to see what damage had been done, taking me along. As the agriculturist got estimates of crop destruction (50 percent of the wheat, 80 percent of the corn), we began to find out the peasants' explanations for this storm. One old man put it simply when he said, "it was God's will." [9] Even though the storm had occurred two days before, the people were still dazed at the thought of so much labor going to waste, to say nothing of the loss of the expected income from the crops. They did not seem bitter, nor altogether resigned. The visit of the nomarch (prefect) and his hour's discussion with the men brought a ray of hope. After many matters had been looked into, the nomarch asked just before he left: "I'm going to write up this report and make request for aid from the proper ministry. What are you people of Kokinya going to do?" They answered: "We are going to go to our fields, work with our vineyards. The rain has made new ravines. We must carry soil and fill in. Now we will have to work harder."

This statement reminded me of a conversation one evening on an apartment terrace halfway up Lykabettos Hill, a hill standing all by itself in the center of Athens. The Acropolis was clearly outlined in the moonlight, and the lights on the sea far in the distance told of the movement of boats in and out of the harbor. There we discussed the Greek peasant's idea of fate with a group of educated Greek friends — one of them the novelist Elias Venezis. As the backdrop for the present point of view we went back to the ancient idea of the three Fates and the classic themes of Greek tragedy.[10]

The Greeks with whom we were talking were careful to distinguish between the passive fatalism of the lands farther to the east and the active fatalism of the Greeks, pointing out that the Greek peasant made no abject surrender to nature or other forces about him. Even though the individual knows the odds are against him, he must stand up and face his destiny with dignity and correctness, whether the forces which would crush him show any mercy or not. We were reminded of the common saying, "syn Athena kai cheira kinei," which means, "with Athena move your own hand too." Thus it was neither incongruous nor contradictory to hear one Kokinya peasant say, "it is God's will," and to hear his neighbor say "now we will have to work harder."

On such a mental adjustment to the mountains, plains, and the sea, which we shall take up in order, is the survival of the Greek people largely based.

Whereas the effect of the coming of the Asia Minor refugees was to increase the population and heighten the economic activity of the country, the effect of the stay of these northern villagers in town was to loosen somewhat the social cement that holds the kinship group and the village community together. It set in motion more perceptibly in Northern Greece what has long been characteristic of Central Greece and the Peloponnesos: the urbanization of the countryside, in the sense of the spreading influence of urban ways.

War is not the only source of cataclysmic change. Devastating earthquakes sometimes destroy densely populated areas. In 1953, shortly after we left Greece, earthquakes created havoc on the islands of Cephalonia and Zante. My former interpreter, Bessie Adossides, described this in a revealing letter:

> As soon as these earthquakes started, Mother and I presented ourselves to the Greek Red Cross and volunteered to go either to Cephalonia or Zante. Thus on August 13th we left via Patras for Zante. Mother was heading a group of eighteen volunteer nurses and, when we arrived at our destination, the whole town was still in flames and the place smelled of burned flesh. The disaster in the town of Zante was complete; only one church, a school, and a bank were standing. The panic, suffering, and agony of the population were indescribable. We found on our arrival that nurses from Patras had set up a provisionary tent hospital, but as there was not sufficient place for all the wounded and sick, these were being shipped to Patras. For two nights we stayed awake as the fire came very near the hospital and we had to be ready to carry everybody on board a ship in the harbor. Luckily this did not happen.

Although this letter describes the efforts of a few individuals, the whole Greek nation was asked to contribute to the reconstruction of these destroyed island communities. International agencies also helped. Such a catastrophic experience, with its rupturing of some social bonds and the forging of new ones, has brought about social changes in the areas affected. The economic drain resulted in readjustment of the government's plans for economic development, since substantial material resources had to be routed to this area of dire need. A few years before, the city of Volos in Thessaly had been badly affected; earlier it had been Corinth.

No matter what type of cataclysm occurs, when governmental authorities have to step in and assist in reconstruction, there is always the tendency — as expressed by one nomarch — for people to take "distribution of clothing, food, and medical care for granted, hoping it will go on forever." The fact that they have suffered entitles them, so they think, to continued support even after reconstruction days are past.

Social Drift

Even in a country as subjected to catastrophe as Greece, individuals decide whether or not to try new ways which they have seen or about which

Vasilika

623 responsibility. The collection of its monies is undertaken by the central government's financial officers directed from Amphiklia, and the expenditure of its monies is supervised and controlled by the officers of the *nomarchia* centered in Levadhia. Moreover, the council has neither responsibility nor power over other village-wide activities. Law enforcement and the operation of the village school and of the village churches are administered separately both from the council and each from the others. Before turning to these activities, some mention of the council's role in Vasilika apart from the formal expectations is appropriate.

[829] [622] It is indicative of the village attitude toward the council, in contrast with that toward the president, that at no time during our stay in the village was any man pointed out to us as having the status of council member or as having had it in the past. When, accompanied by several villagers, we visited the former schoolteacher of Vasilika, he asked us who was currently the president but did not ask about the council members. The president has an important role to play 622 in the minds of the villagers. He is expected to act as liaison between them and 829 other governmental units and to further the interests of Vasilika in whatever situations may develop. For example, there was some criticism of the president for not arranging more rapidly for the bus to come through the village. In ● 731 early April 1956, an unexpected and heavy rain flooded the fields and threatened 312 to destroy the wheat if the waters did not drain off quickly. Most of the vil- 208 lagers (not all, however) were agitated, and in the early morning groups of men 521 climbed the hill and looked out over the fields shaking their heads and lamenting, "*Katastrofes!*" "Catastrophy!" Then came the discussion of why the fields were not draining properly. All day, in the coffeehouse, the men inveighed against the English company which had owned the former Lake Copais land for setting up a drainage system that did not go beyond those lands; against the Greeks who took over the company for continuing a system that, the men insisted, not only did not drain the lands of Vasilika, but even made it subject to flooding; against the government for not having built a proposed dam that would have protected the region; and against the village president for not immediately calling on the nomarch's engineers to suggest remedies for the present situation. For days after, there were rumors that the nomarch's technical staff would meet with the president and councils of Parori and Vasilika to arrange a public works program of low dams to protect the area from possible future disasters from the same cause. The meeting never took place. Some villagers 731 blamed the situation on the unwillingness of the farmers to work together to 312 build their own small dams. One man had earlier tried to protect his own 208 fields by building low earthen dikes around them, but his work was wasted because the surrounding fields were not so protected. The morning after the storm some of the men had quickly built up a two-foot dam at an obviously vulnerable spot near the cemetery. But a villager pointed out that if the water had risen just a little further, the placement of the dam would have made the situation worse rather than better. There was no more rain; the waters gradually receded; each man watched for his own fields to dry out. Those who were left with one or two small plots that were so badly flooded as to be useless for

Vasilika

planting that season accepted the fact with resignation. The agitation died down after several days and the matter was not mentioned again.

Let us return now to the other officials and organizations that have responsibilities concerning the village as a whole. Law enforcement in Vasilika is in the hands of two *agbrofilakes* (rural policemen). They are appointed by the nomarch and are responsible for preventing and detecting animal trespass in the fields and thefts of produce as well as of personal property. They also watch sales of cotton and tobacco and can therefore furnish information of value for estimating produce taxes. The village police are sometimes called in to deal with disorderly conduct or with any physical violence which threatens to become serious. The *aghrofilakes* wear grey uniforms with green trim and are easily distinguished from the other villagers. Vasilika's police used to be *kseni* (strangers) who came from two different neighboring villages, but in 1961 the men were natives of the village who were relatives of the then current president.

There are two other semigovernmental village-wide organizations: the agricultural cooperative credit society, and the welfare committee. The villagers elect a president of the credit society, whose signature is necessary on almost all requests for credit, since the Agricultural Bank works in conjunction with the cooperative. The village priest, the president of the council, and the president of the agricultural credit society constitute the welfare committee. They attest to the financial need of a villager who wishes to avail himself of free government welfare services. In most cases, however, the village families who occasionally need help receive irregular gifts of food and clothing from other village families, and their plight is not considered a matter for joint village action. When several cartons of surplus American butter, cheese, and powdered milk reached the village, it was the priest who distributed the goods. On that occasion, the daughter of one of the recipients brought some butter (which the villagers usually do not use in cooking or baking) to a neighbor's daughter, who contributed eggs, flour, and sugar. The two girls spent a busy afternoon mixing a cake according to a half-remembered recipe given them by an extension worker some years before. The cake was not a success by any standards for such confections, but the girls were satisfied because they had produced a European-style sweet.

The Village School

The village school is supervised and controlled by the Ministry of Education in Athens. The teacher is appointed by the ministry, which also prescribes the curriculum. In Vasilika, in 1955–1956, the school had thirty pupils distributed unevenly among the six grades. The first grade had the largest number of children because its ranks were augmented by the children of the shepherds, some of whom had had no previous schooling and were assigned to the first grade regardless of age. A man originally from the Peloponnesus taught the children. He had married a woman from Parori, who was herself one of the

[Village Life]

When the second world war came, followed by Italian and German occupation and drastic derangement of the national economy, the situation of the hill villages became truly desperate. Starvation visited many of them.

Famine in time of war was age-old; and the response of the hillsmen of Greece also had very ancient precedent behind it, for they took gun in hand, and attempted to seize forcibly what they could no longer gain peaceably from the plains. They formed the backbone of the wartime resistance forces, and justified their violence by patriotism, quite in the spirit their forefathers had shown in attacking the Turks. Yet the resistance movement was not merely a reassertion of old patterns. Its leadership was mainly provided by Communists, who in earlier years had been a small and not very significant group, largely confined to the towns. [1]

In the wartime resistance movement the inhabitants of the hill villages found a sort of economic relief, inasmuch as the guerrilla bands lived by raiding the plains, taking by force a part of the agricultural surplus of those regions in order to feed themselves. A young man, without any real occupation in his native village, and without any hope of a career at home which could satisfy even the traditionally low level of expectation among the hillsmen, could, by joining a guerrilla band, hope to feed himself and relieve his family of the burden of his presence. In addition, he could become a hero, fighting for freedom and liberty, social justice and a better life for all.

For most peasant boys, the ulterior aims of their Communist leaders meant little or nothing. Indeed, the Communists were at very considerable pains to play down any plans they had for social revolution, and welcomed persons of widely differing social views into the ranks of the resistance. This was, of course,

1. There were a number of non-Communist resistance bands also, but most of them did not last long, and the successful ones were confined to Epirus, in the northwest.

Hill Villages

KOTTA

Kotta is situated in the far northwestern corner of Greece, about five miles from the Albanian border, and not more than fifteen miles from the point where Yugoslavia, Albania and Greece adjoin. Flowing past the village is a small stream which in due course descends to join the Aliakmon River. The valley slopes are steep, and the villagers possess only 500 stremmata (125 acres) of arable soil. Much of this is thin patches on the hillsides; of good bottom land the community has less than ten acres.

When I visited the village in 1947, the inhabitants were starving. Seemingly innumerable children peeped out from every house, many of them showing bloated bellies beneath motley rags that served as clothing but scarcely covered their nakedness. The village was then in the hands of the guerrillas, who had stationed a detachment of fifteen boys (the eldest was not more than eighteen) in the community. The ordinary speech was Slavic, and at least some of the villagers felt that it would be better for them if their village belonged to Yugoslav Macedonia. Macedonian national feeling may have played some part in this attitude, but probably the major determinant was the knowledge that conditions across the border were not quite so hard as those they faced in Greece.

The people of Kotta were, indeed, living under war conditions. The Greek army had blocked the main road between Florina and Kastoria, which runs not far from the village site, and no vehicles could pass without special permits; men could still get through on foot by taking off across open country, but there was little incentive to do so. Work could not be found down in the plains, and a man from Kotta, with the trace of a Slavic accent in his Greek, was courting arrest or a beating if he

Cherasia

[Hill Villages]

621 Ten men in the village had come back after serving with the
669 guerrillas, and were kept under informal surveillance. Some
727 forty others had not returned, and most of these were presumed dead. Thirteen who had retreated behind the iron curtain in 1949 had, however, sent letters to their relatives. The village president, who provided these statistics, was obviously well informed on these matters and clearly believed that a major part of his duties was to keep a close watch upon leftists or suspected leftists.

166 Here, then, is a village scarcely better off than it was in 1947.
621 In spite of the expenditure of tens of thousands of dollars, de-
433 rived indirectly from American aid – indeed, *because* of such
[669] expenditure – the acute and untenable overcrowding of very poor land continues; and with it the political tensions of 1946–49 seethe, just beneath the surface. The only solution for Cherasia which seems to make any sense is to remove two thirds or more of the present population, and find land or work for them elsewhere. This has not been attempted; official policy has done just the opposite by placing barriers in the way of migration from the community.

[464] Unfortunately, Volos, the natural outlet for the surplus population of Cherasia, was itself undergoing a first-class economic crisis in 1956.[4] The port, which is the economic heart of the

[731] [653] [288] 4. An earthquake which damaged many buildings in Volos rather badly in 1954 was, under the circumstances, a perverse blessing to many of the poorer families of the town. Repair and reconstruction got under way quickly, thanks to a special grant from the national budget (and assisted by a special American aid appropriation of $7 million for the purpose). This gave temporary work to many, but by 1956 this extraordinary source of employment had dwindled. At the same time, a large textile plant in the city went on part time, and discharged a large proportion of its working force, as a result of a general crisis in the Greek textile trade. Consequently, Volos was, like Cherasia, unusually clean and tidy in 1956, and unusually depressed.
